3.1. Potential Health Effects

Primary Route of Exposure Inhalation

3.2. Relevant Route of Exposure

Eye Contact Contact with particulate may cause slight to moderate eye irritation. Abrasive action of dust particulate can damage eye.

Skin Contact Prolonged or repeated contact may cause slight to moderate skin irritation.

Inhalation Overexposure by inhalation of airborne particulate, dust, or fumes is irritating to the nose, throat and respiratory tract. Inhalation of excessive levels of dust or fumes may be harmful.

Ingestion Ingestion is an unlikely route of exposure; no hazard in normal industrial use. Small amounts (< tablespoon) swallowed during normal handling operations are not likely to cause injury. However, if ingested in sufficient quantity may cause injury such as gastrointestinal disturbances. Symptoms may include irritation, nausea, vomiting, abdominal pain, and diarrhea.

4. FIRST AID MEASURES

4.1. Emergency and First Aid Procedures

In case of skin contact	Wash with mild soap and water to remove any dust adhering to skin. A commercially available hand lotion may be used to treat dry skin areas. If skin has become cracked, take appropriate action to prevent infection and promote healing. If irritation persists, contact physician.
In case of eye contact	Flush thoroughly with clean, flowing, lukewarm water (low pressure) for 15 minutes. If irritation persists, contact a physician.
Inhalation	Leave the area of dust exposure and remain away until coughing or other symptoms subside. If not breathing, give artificial respiration or give oxygen by trained personnel. If respiratory symptoms persist, contact a physician.
Ingestion	Ingestion is an unlikely route of exposure. If ingested in sufficient quantity and victim conscious, give 1-2 glasses of milk. Never give anything by mouth to an unconscious person. Leave decision to induce vomiting to qualified medical personnel, since particles may be aspirated into the lungs. Seek immediate medical attention.
